

Spaces

App-free indoor navigation for hospitals and healthcare estates

Give every patient and staff member turn-by-turn directions to any ward, clinic, or department, all delivered via QR code or link, with no app to download or IT infrastructure to change.

What makes Spaces different?

Spaces combines precise indoor positioning, flexible deployment, and accessibility by design to deliver reliable navigation across complex, multi-level healthcare environments.

Instant, app-free deployment

No app downloads or installs. Spaces runs directly in the browser, so updates to your environment can be deployed instantly to staff and visitors.

No hardware or technical setup

Spaces removes the need for hardware installations like beacons. Deliver multi-floor wayfinding without infrastructure rollouts or ongoing maintenance.

Accessibility built-in

Visitors and staff receive clear, spoken, turn-by-turn instructions, enabling blind, low-vision, and wheelchair users to move through complex spaces with confidence.

From scan to shareable link in days, not months

Use existing or new scans to publish hospital navigation quickly. Spaces delivers precise, app-free guidance without beacon rollouts, Wi-Fi location dependencies, or app deployment friction.

How it works

Reduce signage update costs

Reduce missed appointments

Speed up response times

Measurable gains for patients, staff and estates

Help patients arrive in the right place, reduce avoidable direction requests, and give estates teams a more flexible way to manage navigation across changing hospital environments.

Fewer missed or delayed appointments

Guide patients from entrances and car parks to the right clinic, ward, or department.

Speed up response times

Route staff and contractors directly to equipment, rooms, and critical infrastructure.

Lower signage and update overhead

Update routes and destinations digitally as clinics, wards, and departments change.

Secure, compliant, and access-controlled

Zapworks Spaces is built to meet the data governance, access control, and operational requirements of NHS trusts, foundation trusts, and private healthcare groups.
